Impressum

RogTech LLC began in 2019 with the goal to help customers get a grasp on their technology and data needs. We strive to bring a cohesive understanding to the technology we use and deploy, at a price point that works for everybody. We are willing to consult on the smallest projects up to the largest deployments in corporate america, but focus mostly on the small business, non-profit/503(c) organizations, or government agencies. If

Skills & Services

Server Design, Storage, & Administration

Design and deploy data storage servers and administrate by group management policies, user creation/management, and network policies. From Storage Area Networks using SMB, AFP, Fiber Channel, or iSCSI protocols, to simple Workgroup setups of 3-4 computers sharing a local printer; Our services can be used by all.

Consulting, Cabling, & Security systems

Consulting to make sure your best interests are in mind, we speak on your behalf to other vendors that understand the lingo and dialog to make sure you get what you need, not pay for things you don't need. Data cable drops are a constant need in the business world, having somebody that can competently place distribution boxes. Increasingly now, customers are realizing security systems are needed to protect assets and investments, and while security systems cannot prevent bad things from happening, it can absolutely assist with recovery and capture. IP-based security systems are so common, but keeping them secure is often overlooked. We make sure that doesn't happen.

Pricing

RogTech LLC works on a negotiated per customer basis. We operate best by being able to support our customers and the equipment we install and maintain over a long period of time and do our best to make pricing reasonable for any tier of customers based on demand and needs. Contact us to figure out what we can do for you.
